

Afternoon Headlines

- Colder changes in midday data thanks to colder days being added to the 11-15 day period.
- Warmth continues East in the 1-5 day, but expect additional HDD gains as colder days are added to the forecast.
- Still watching mid-January warmer risks. Some evidence that cold may not have strong durability into January, especially in the high energy usage areas of the Northeast and Texas.

Regional Forecast Confidence

Afternoon HDD Round Up

Time Period	GFS Forecast	Change Vs. Overnight	European Forecast	Change Vs. Overnight	30Yr Normal GWHDD	EIA Region of Highest Heating Demand
1-5	105.2	+1.9	114.3	-0.5	122.2	Midwest
